Abstracts

The global Dairy Products Membrane Filtration Equipment market size is expected to reach \$ 261 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

Dairy membrane filtration equipment is used in the production of dairy products such as milk, whey, and dairy beverages for separation, concentration, sterilization, desalination, and standardization. It relies on membrane separation technologies such as microfiltration, ultrafiltration, nanofiltration, and reverse osmosis to retain nutrients, improve product stability, and increase production efficiency under relatively low temperatures.

Upstream components include membrane materials, membrane modules, stainless steel pipes and valves, pumps, pressure vessels, automatic control systems, cleaning systems, and food-grade seals. Downstream customers primarily include dairy processing companies, whey protein producers, cheese factories, dairy beverage companies, infant formula companies, and food engineering integrators.

The global market price for dairy membrane filtration equipment is US\$81,500 per unit, with global sales of approximately 2,450 units and an annual production capacity of 3,000-4,000 units. The industry profit margin is approximately 28%.

The future global dairy membrane filtration equipment market will develop towards high-throughput, low-energy consumption, automation, and refined separation. As dairy companies increase their demand for whey protein recovery, low-temperature sterilization, lactose separation, concentration and emission reduction, and the development of high-value-added dairy products, membrane filtration will further replace

some traditional heat treatment and evaporation processes. European and American markets place greater emphasis on energy conservation, food safety, and product functionalization, while emerging markets focus on capacity expansion, equipment cost-effectiveness, and localized services. Future competition will concentrate on membrane lifespan, antifouling capabilities, CIP cleaning efficiency, system integration capabilities, and intelligent monitoring levels.
