Abstracts

According to our (Global Info Research) latest study, the global Dairy Testing Services market size was valued at US\$ 747 million in 2025 and is forecast to a readjusted size of US\$ 1277 million by 2032 with a CAGR of 7.9% during review period.

Dairy Testing Services refer to quality, safety, nutritional, authenticity, and compliance testing services provided by third-party laboratories, certification bodies, or professional testing organizations for raw milk, pasteurized milk, UHT milk, milk powder, whey, cheese, yogurt, butter, ice cream, infant formula, and other dairy products. Testing typically includes microbiological testing, detection of pathogens, antibiotic residues, pesticide and veterinary drug residues, heavy metals, mycotoxins, allergens, nutritional components, adulteration identification, shelf-life verification, labeling compliance, and export access testing.

Dairy products are classified as high-risk, highly regulated foods. The increasingly stringent requirements for microbial limits, antibiotic residues, accuracy of nutrition labeling, and export access necessitate more frequent third-party testing and batch release testing for dairy companies. Market data from 2026 also lists 'strengthened food safety and quality compliance supervision' as a major driver of growth in the dairy testing market. Traditional testing focuses on fat, protein, lactose, total bacterial count, and pathogenic bacteria, but is expanding to higher value-added items such as milk source traceability, adulteration identification, species identification, verification of fortified ingredients, and screening for illegal additives.
