According to our (Global Info Research) latest study, the global Dapagliflozin and Metformin Extended-Release Tablets market size was valued at US\$ 529 million in 2025 and is forecast to a readjusted size of US\$ 1681 million by 2032 with a CAGR of 14.8% during review period.

In 2025, global Dapagliflozin and Metformin Hydrochloride Extended-Release Tablets production reached approximately 12.5 million units. Dapagliflozin and Metformin Extended-Release Tablets are a combination oral hypoglycemic drug primarily used to treat type 2 diabetes. This medication combines dapagliflozin (an SGLT-2 inhibitor) and metformin (a classic oral hypoglycemic drug), working synergistically. Dapagliflozin reduces blood glucose levels by inhibiting the kidney's reabsorption of glucose, while metformin helps control blood glucose by improving insulin sensitivity and reducing hepatic glucose production. The extended-release tablet formulation allows for the gradual release of the drug over time, minimizing side effects and enhancing patient adherence to the treatment. It is suitable for long-term blood glucose control in patients with type 2 diabetes.

Dapagliflozin and Metformin Extended-Release Tablets, as a novel combination hypoglycemic drug, demonstrate significant market potential in the treatment of type 2 diabetes due to its innovative combination therapy and extended-release technology. With the growing global prevalence of diabetes, especially in aging societies, the demand for diabetes medications continues to rise. Dapagliflozin helps patients effectively control blood glucose by inhibiting the SGLT-2 transporter, while metformin provides a dual glucose-lowering effect by improving insulin sensitivity and reducing hepatic glucose production.

The extended-release formulation of dapagliflozin and metformin offers better tolerance and fewer side effects, improving patient adherence, which is crucial for the long-term management of diabetes. Additionally, with the advancement of precision medicine, the demand for personalized treatments is increasing, and combination drugs like dapagliflozin and metformin extended-release tablets are better able to meet the diverse needs of patients.
