Abstracts

Dark Web Monitoring tools are used to identify mentions of their organization on deep web and dark web forums and marketplaces, particularly any mentions which include compromised business data being illegally shared or sold. Deep web references areas on the internet that are non-indexed pages; dark web refers to non-indexed, illicit sites and private communications which are only accessible via Tor and I2P. This software uses automated scanners, web crawlers, and scraping techniques to continually monitor and analyze in real time any leaked sensitive business information, such as customer lists or data, employee login credentials, trade secrets, proprietary technology, and other valuable datasets made available on illicit markets. Businesses use dark web monitoring to reduce business risk, detect data breaches early, and to protect their intellectual property and brand reputation. Most commonly, dark web monitoring software is deployed and managed by a company's IT team or security team.
