According to our (Global Info Research) latest study, the global Data Acquisition Computer Boards market size was valued at US$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Data acquisition computer boards, also known as DAQ cards, are self-contained printed circuit boards (PCBs) that plug into backplanes, motherboards, or interface directly with a computer. They either have direct inputs or receive analog and digital inputs from signal conditioners, modules, relays or sensors. They are capable of supplying outputs in the form of an analog voltage, current, frequency, or switched output. They are used to translate signal and sensor data into a digital format that computers can process. Data acquisition computer boards are an integral part of data acquisition systems for monitoring, analyzing, and/or controlling systems and processes.
