According to our (Global Info Research) latest study, the global Data Acquisition (DAQ) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

In today's world, increasing industrial automation and rise in demand for real time data analysis leads to adoption of data acquisition systems in enterprises. Data acquisition system is an integration of devices used to collect information by measuring an electrical and physical phenomenon with a computer. A data acquisition system consists of hardware components including sensors and a computer with a programmable software. The hardware component in a DAQ acts as an interface between signal and a PC. DAQ systems collect data from instruments and sensors attached to devices in various industrial sites and transmit that data to a central site for monitoring and controlling purpose.

Factors such as growing industrial automation requirements, increasing investments in infrastructure and renewable energy power plants are the factors driving the growth of data acquisition (DAQ) market. Moreover, increasing data monitoring requirements globally and increasing demand of the equipment for strategic decision-making in enterprise is resulting into the growth of data acquisition (DAQ) market.
