According to our (Global Info Research) latest study, the global Data Baluns market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Data baluns connect balanced lines to unbalanced lines in data transmission applications. They allow two different cable types to be joined together with a minimum amount of electrical gradation. Single-path data baluns provide an interface between older 75-ohm coaxial systems and 100-ohm or 120-ohm twisted pair wiring. Dual-path data baluns allow two different coaxial signals to be carried over a single length of twisted pair wire. Product specifications for both types of data baluns include maximum working voltage, isolation voltage, screen coupling, transient energy, direct current (DC) spark-over, impulse discharge, impedance and insertion loss. Features include onboard protection against lightning and transient spikes.
