According to our (Global Info Research) latest study, the global Data Center Backup Service market size was valued at US\$ 1062 million in 2025 and is forecast to a readjusted size of US\$ 1576 million by 2032 with a CAGR of 5.7% during review period.

Data center backup service refers to copying important data in the data center to independent storage media or remote data centers to prevent data loss and irreversible consequences caused by catastrophic events. Through backup services, users can quickly restore data when data is lost or damaged to ensure business continuity and data integrity. Backup services usually include the formulation of backup strategies, the selection of backup tools, backup execution and monitoring, and recovery drills.

The global data center backup service market is experiencing steady growth driven by surging data volumes, escalating ransomware threats, and the increasing adoption of hybrid cloud. North America and Europe, as mature markets, lead in backup-as-a-service, immutable backup, and disaster recovery orchestration services, leveraging their advanced cloud backup technologies, stringent data compliance regulations, and highly professional disaster recovery service ecosystems. The Asia-Pacific region is the fastest-growing and most demanding sector, with China and Southeast Asian countries experiencing rapid adoption of local backup appliances, hybrid cloud backup, and data archiving services, driven by accelerated enterprise digital transformation, increased awareness of critical data protection, and the wave of domestic substitution. Local service providers are rapidly emerging. The Middle East and Africa focus on critical information infrastructure protection and data sovereignty compliance. The industry as a whole is accelerating its evolution towards AI-driven anomaly detection, rapid ransomware recovery, and on-demand disaster recovery.
