Global Data Center Cooling Optimization Software Market 2026 by Company, Regions, Type and Application, Forecast to 2032

https://marketpublishers.com/r/GD72EA9F58D0EN.html
Date: September 2026
Pages: 195
Price: US$ 3,480.00 (Single User License)
ID: GD72EA9F58D0EN

Abstracts

According to our (Global Info Research) latest study, the global Data Center Cooling Optimization Software market size was valued at US$ 548 million in 2025 and is forecast to a readjusted size of US$ 1684 million by 2032 with a CAGR of 17.2% during review period.

Data Center Cooling Optimization Software refers to specialized software platforms and optimization modules used to improve the thermal performance, cooling efficiency and operating stability of data centers. The software typically collects and analyzes IT load, rack temperature, humidity, differential pressure, airflow, chilled-water and cooling-water temperatures, coolant flow, equipment power consumption and operating data from chillers, cooling towers, pumps, CRAC/CRAH units, fan walls and coolant distribution units. Using rule-based optimization, mathematical models, machine learning, reinforcement learning, model predictive control, computational fluid dynamics or physics-based digital twins, these solutions generate recommendations or automatically adjust cooling capacity, equipment sequencing, fan and pump speeds, supply-water temperatures, airflow distribution and cooling setpoints. The market primarily covers standalone AI cooling optimization platforms, supervisory and closed-loop control software, thermal digital twins, chiller-plant optimization software, white-space cooling optimization modules and dedicated cooling optimization functions embedded within DCIM, BMS, EMS or cooling-control environments. Commercial applications span hyperscale and AI data centers, colocation facilities, enterprise data centers, telecom facilities and other mission-critical computing environments.

Key Findings

+357 96 030922
info@marketpublishers.com

The confirmed market structure contains 22 core suppliers, 16 extended suppliers and 13 additional companies under verification

North America and Europe host the densest clusters of specialized AI cooling optimization and digital-twin software suppliers

China features a comparatively strong integrated model combining cooling equipment, energy management, DCIM and optimization software

Supervisory optimization and thermal analytics form the established commercial base, while autonomous control and liquid-cooling optimization are emerging rapidly

Competition spans pure-play AI software, digital twins, DCIM platforms, industrial automation groups and cooling equipment manufacturers

Market Trends

Data Center Cooling Optimization Software is moving from monitoring and advisory analytics toward active supervisory optimization and bounded autonomous control. Traditional software mainly visualized temperatures, airflow and cooling utilization, whereas newer platforms increasingly connect IT load, thermal conditions and cooling infrastructure in a continuous feedback loop, dynamically adjusting cooling capacity and operating setpoints according to changing workloads. Schneider Electric and Siemens already commercialize software that actively optimizes cooling rather than merely displaying facility conditions, while physics-based digital twins are increasingly being used to evaluate cooling, capacity and failure scenarios during both design and operation. AI and HPC are accelerating this transition because rapidly changing GPU loads create more dynamic thermal conditions than conventional enterprise workloads. ASHRAE's 2026 AI data center framework highlights the rise of rack densities from around 120 kW toward several hundred kilowatts, increasing the need to coordinate air cooling, chilled-water infrastructure and liquid-cooling loops. The longer-term product direction is therefore toward hybrid physics-plus-AI models, real-time digital twins, workload-aware cooling, liquid-cooling optimization and safer closed-loop control with operating constraints and fallback mechanisms.

Market Dynamics

Drivers

The principal growth driver is the increasing thermal and power intensity of data center infrastructure. The IEA estimates that global data center electricity consumption increased strongly in 2025 and could rise from about 485 TWh in 2025 to approximately 950 TWh by 2030, while electricity consumption from AI-focused data centers grows substantially faster. This expansion raises the economic value of optimizing existing cooling capacity rather than relying only on additional physical infrastructure. Higher rack density, variable GPU workloads, tighter power availability and the transition toward mixed air-and-liquid cooling architectures are also increasing the number of operating variables that facility teams must coordinate. At the policy level, energy-performance reporting requirements for data centers in the European Union and U.S. programs supporting advanced cooling technologies are strengthening demand for measurable improvements in energy and thermal performance.

Restraints

Market adoption remains constrained by integration complexity, operational risk and the fragmented control architecture of existing data centers. Optimization software must connect reliably with different generations and brands of BMS, DCIM, PLC, CRAC/CRAH, chillers, pumps, sensors and increasingly CDUs, while maintaining redundancy and thermal safety. Many operators are willing to use analytics and recommended setpoints but remain more cautious about allowing third-party software to write directly into mission-critical control systems. The commercial model can also be difficult to standardize because products are licensed by site, rack, capacity, software module or subscription and are frequently bundled with engineering, controls or cooling equipment. These factors extend validation cycles, complicate software-only revenue attribution and favor suppliers that can demonstrate stable operation across heterogeneous facilities.

Opportunities

The most attractive opportunities are emerging around AI factories, high-density GPU clusters, retrofit optimization and hybrid air-liquid cooling. As rack densities rise, optimization value is shifting from simple energy savings toward capacity release, thermal-risk reduction and more effective utilization of constrained power and cooling

+357 96 030922
info@marketpublishers.com

infrastructure. Liquid cooling creates an additional software layer around CDU operation, coolant temperature, flow control, heat rejection and coordination with residual air cooling, while digital twins can increasingly bridge design, commissioning and live operations. Suppliers capable of operating above existing BMS and equipment controls without requiring wholesale hardware replacement have an opportunity to penetrate brownfield colocation and enterprise facilities. Policy-driven efficiency reporting and increasingly transparent sustainability metrics in Europe may also create additional demand for software that can continuously measure, explain and optimize cooling performance.

Challenges

The main long-term challenge is proving optimization performance without compromising data center availability. Cooling control algorithms must respond to rapidly changing workloads while respecting equipment limitations, redundancy requirements and site-specific operating rules, making deployment considerably more demanding than generic building HVAC optimization. Cybersecurity, data sovereignty and customer requirements for on-premises or air-gapped operation can further raise implementation costs. Another structural challenge is platform bundling: capabilities that are currently sold by independent AI optimization vendors may increasingly be incorporated into DCIM, BMS, liquid-cooling controls and cooling OEM software stacks. As a result, independent suppliers will need to demonstrate equipment-agnostic integration, measurable energy or capacity benefits, robust fallback logic and clear lifecycle economics rather than relying on AI functionality alone.

Value Chain Analysis

The upstream layer of the Data Center Cooling Optimization Software value chain consists primarily of operational data and enabling technologies rather than conventional physical raw materials. Key inputs include temperature, humidity, pressure, flow and power sensors; BMS, PLC, DCIM and equipment-control interfaces; IT workload and rack telemetry; cloud and edge computing infrastructure; CFD and digital-twin engines; AI/ML frameworks; and domain knowledge covering refrigeration, hydronics, airflow and facility control. The quality, granularity and latency of these inputs directly affect optimization accuracy. As liquid cooling expands, data from CDUs, coolant loops, pumps and heat-rejection systems is becoming increasingly important, widening the software integration boundary from white-space cooling toward the complete thermal chain.

+357 96 030922
info@marketpublishers.com

The midstream value is created by software vendors that transform facility data into thermal models, predictions, recommended setpoints or executable control decisions. Value generally increases as the product moves from visualization to predictive analytics, supervisory optimization and validated closed-loop control because the software becomes more directly linked to energy savings, capacity utilization and reliability. Downstream customers include hyperscale operators, colocation providers, enterprise data centers, telecom operators and other mission-critical facilities. Pure software companies tend to have relatively asset-light cost structures but face substantial R&D, integration and customer-validation expenses, while cooling and automation OEMs can leverage installed equipment, service networks and native control interfaces. This difference explains why the market supports both specialist software vendors and large infrastructure groups.

Segment Insights

By primary optimization function, advisory analytics and supervisory setpoint optimization currently represent the broadest established commercial base because they can improve cooling efficiency while preserving the customer's existing BMS and equipment-level control architecture. Closed-loop autonomous control is a smaller but strategically important direction, particularly for facilities with dense instrumentation, standardized controls and rapidly changing AI workloads. Schneider Electric's Cooling Optimize uses active cooling control, while Siemens combines sensors, cooling controls and an AI engine to match cooling with IT load, demonstrating the transition from passive monitoring toward operational optimization. Thermal digital twins form another important segment, with applications extending from new data center design and capacity planning to retrofit evaluation and operating optimization. Cadence's data center digital-twin portfolio illustrates how physics-based simulation can model design configurations, cooling performance and failure scenarios before changes are implemented physically.

By cooling domain, white-space air cooling and central chilled-water plant optimization remain the most mature commercial applications, while liquid-cooling loop and hybrid whole-system optimization offer stronger incremental technology opportunities. The shift toward high-density AI computing increasingly requires software to coordinate air-side thermal conditions, water-side equipment and CDU-level liquid systems rather than optimize each subsystem independently. From a deployment perspective, on-premises or hybrid architectures remain important for mission-critical customers because real-

+357 96 030922
info@marketpublishers.com

time control, cybersecurity and resilience requirements often favor local execution, while cloud platforms remain valuable for model training, fleet analytics and multi-site benchmarking.

Downstream Market Opportunities

Hyperscale and AI infrastructure represent the most technically demanding opportunity because fast-changing GPU workloads, high rack densities and constrained utility capacity increase the economic cost of both insufficient and excessive cooling. Colocation facilities constitute another attractive customer group because heterogeneous tenant loads and frequent capacity changes create persistent demand for thermal visibility, capacity planning and cooling optimization. Enterprise and telecom data centers provide a substantial retrofit opportunity, particularly where legacy cooling equipment remains serviceable but control strategies are conservative or fragmented. Across these customer groups, the purchasing rationale is increasingly shifting from energy savings alone toward a broader combination of power-capacity release, avoidance of thermal hot spots, higher usable rack density, reduced manual tuning and improved resilience under rapidly changing workloads. ASHRAE's AI data center framework reinforces the importance of integrated thermal design and operation as facility densities increase.

Regional Insights

North America and Europe currently have the deepest concentration of specialized Data Center Cooling Optimization Software suppliers in the confirmed vendor pool. North America is particularly active in autonomous AI control, reinforcement-learning-oriented optimization and software-led approaches, supported by a large hyperscale and AI infrastructure base. Europe has a diversified supplier structure spanning AI optimization, chiller-plant control, thermal digital twins and industrial automation, while regulatory emphasis on data center energy-performance reporting and sustainability rating is adding another commercial driver for measurable optimization technologies. The European Commission has already established energy-performance reporting requirements and is developing a broader rating and minimum-performance framework for data centers.

China represents a distinct competitive model in which cooling optimization software is more frequently embedded within data center infrastructure, precision cooling, energy-

+357 96 030922
info@marketpublishers.com

management or DCIM solutions rather than sold solely as independent SaaS. This supports strong local delivery and equipment integration but makes software-only market measurement more complex. Japan is entering a more active development phase as HVAC, electronics and IT groups explore AI-driven thermal management, while South Korea and India currently show a greater proportion of integrated infrastructure and service-oriented participants than confirmed cooling-optimization pure plays. Southeast Asia, led by Singapore, is developing a smaller but notable ecosystem around AI operations and digital twins as regional data center capacity expands.

Competitive Landscape Analysis

The competitive landscape is fragmented and technology-diverse rather than dominated by a single software category. The confirmed core pool contains 22 suppliers, supplemented by 16 extended suppliers whose cooling optimization activities are more tightly integrated with DCIM, building controls, energy management or cooling hardware, plus 13 additional companies retained for further verification. Large infrastructure and automation groups compete through installed equipment bases, native control interfaces, global service organizations and their ability to bundle software with broader data center projects. Pure-play AI suppliers compete on equipment independence, algorithmic optimization, deployment speed and the ability to generate measurable operational benefits without requiring wholesale replacement of existing cooling infrastructure. Digital-twin specialists differentiate through physics-based modeling and scenario analysis, particularly where customers need to understand airflow, thermal capacity and failure behavior before physical changes are made. Strategic consolidation is reinforcing convergence between these models: Cadence acquired Future Facilities to expand physics-based data center digital-twin capabilities, while Vertiv acquired Waylay to strengthen AI-based monitoring, predictive services and infrastructure optimization. The next phase of competition is therefore likely to focus less on whether a vendor can provide AI analytics and more on whether it can safely integrate across heterogeneous equipment, optimize both air and liquid cooling, operate under mission-critical constraints, and convert optimization into demonstrable energy, capacity and reliability improvements.

Report Scope

This report is a detailed and comprehensive analysis for global Data Center Cooling Optimization Software market. Both quantitative and qualitative analyses are presented

+357 96 030922
info@marketpublishers.com

by company, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.

Key Features:

Global Data Center Cooling Optimization Software market size and forecasts, in consumption value ($ Million), 2021-2032

Global Data Center Cooling Optimization Software market size and forecasts by region and country, in consumption value ($ Million), 2021-2032

Global Data Center Cooling Optimization Software market size and forecasts, by Type and by Application, in consumption value ($ Million), 2021-2032

Global Data Center Cooling Optimization Software market shares of main players, in revenue ($ Million), 2021-2026

The Primary Objectives in This Report Are:

To determine the size of the total market opportunity of global and key countries

To assess the growth potential for Data Center Cooling Optimization Software

To forecast future growth in each product and end-use market

To assess competitive factors affecting the marketplace

This report profiles key players in the global Data Center Cooling Optimization Software market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Schneider Electric SE, Siemens AG, Huawei Investment & Holding Co., Ltd., Vigilent Corporation, Carrier Global Corporation, Phaidra Inc., Cadence Design Systems, Inc., EkkoSense Ltd, etalytics GmbH, STULZ

+357 96 030922
info@marketpublishers.com

GmbH, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Data Center Cooling Optimization Software market is split by Type and by Application. For the period 2021-2032, the growth among segments provides accurate calculations and forecasts for Consumption Value by Type and by Application. This analysis can help you expand your business by targeting qualified niche markets.

Market segment by regions, regional analysis covers

North America (United States, Canada and Mexico)

Europe (Germany, France, UK, Russia, Italy and Rest of Europe)

Asia-Pacific (China, Japan, South Korea, India, Southeast Asia and Rest of Asia-Pacific)

South America (Brazil, Rest of South America)

Middle East & Africa (Turkey, Saudi Arabia, UAE, Rest of Middle East & Africa)

Chapter Outline

Chapter 1, to describe Data Center Cooling Optimization Software product scope, market overview, market estimation caveats and base year.

Chapter 2, to profile the top players of Data Center Cooling Optimization Software, with revenue, gross margin, and global market share of Data Center Cooling Optimization Software from 2021 to 2026.

Chapter 3, the Data Center Cooling Optimization Software competitive situation, revenue, and global market share of top players are analyzed emphatically by landscape contrast.

Chapter 4 and 5, to segment the market size by Type and by Application, with consumption value and growth rate by Type, by Application, from 2021 to 2032.

Chapter 6, 7, 8, 9, and 10, to break the market size data at the country level, with revenue and market share for key countries in the world, from 2021 to 2026.and Data

1 MARKET OVERVIEW

1.1 Product Overview and Scope
1.2 Market Estimation Caveats and Base Year
1.3 Classification of Data Center Cooling Optimization Software by Type
  1.3.1 Overview: Global Data Center Cooling Optimization Software Market Size by Type: 2021 Versus 2025 Versus 2032
  1.3.2 Global Data Center Cooling Optimization Software Consumption Value Market Share by Type in 2025
  1.3.3 Advisory and Analytics Optimization
  1.3.4 Supervisory Setpoint Optimization
  1.3.5 Closed-loop Autonomous Control
  1.3.6 Thermal Digital Twin and Simulation
  1.3.7 Others
1.4 Classification of Data Center Cooling Optimization Software by Primary Cooling Domain
  1.4.1 Overview: Global Data Center Cooling Optimization Software Market Size by Primary Cooling Domain: 2021 Versus 2025 Versus 2032
  1.4.2 Global Data Center Cooling Optimization Software Consumption Value Market Share by Primary Cooling Domain in 2025
  1.4.3 White-space Air Cooling
  1.4.4 Central Chilled-water Plant
  1.4.5 Liquid Cooling Loop & CDU
  1.4.6 Whole-system Cooling
  1.4.7 Others
1.5 Classification of Data Center Cooling Optimization Software by Deployment Model
  1.5.1 Overview: Global Data Center Cooling Optimization Software Market Size by Deployment Model: 2021 Versus 2025 Versus 2032
  1.5.2 Global Data Center Cooling Optimization Software Consumption Value Market Share by Deployment Model in 2025
  1.5.3 Cloud-based
  1.5.4 On-premise
1.6 Global Data Center Cooling Optimization Software Market by Application
  1.6.1 Overview: Global Data Center Cooling Optimization Software Market Size by Application: 2021 Versus 2025 Versus 2032

2.31.4 Beijing Jiamu Kerui Technology Co., Ltd. Data Center Cooling Optimization Software Revenue, Gross Margin and Market Share (2021-2026)
2.31.5 Beijing Jiamu Kerui Technology Co., Ltd. Recent Developments and Future Plans

3 MARKET COMPETITION, BY PLAYERS

3.1 Global Data Center Cooling Optimization Software Revenue and Share by Players (2021-2026)
3.2 Market Share Analysis (2025)
3.2.1 Market Share of Data Center Cooling Optimization Software by Company

+357 96 030922
info@marketpublishers.com

Revenue
3.2.2 Top 3 Data Center Cooling Optimization Software Players Market Share in 2025
3.2.3 Top 6 Data Center Cooling Optimization Software Players Market Share in 2025
3.3 Data Center Cooling Optimization Software Market: Overall Company Footprint Analysis
3.3.1 Data Center Cooling Optimization Software Market: Region Footprint
3.3.2 Data Center Cooling Optimization Software Market: Company Product Type Footprint
3.3.3 Data Center Cooling Optimization Software Market: Company Product Application Footprint
3.4 New Market Entrants and Barriers to Market Entry
3.5 Mergers, Acquisition, Agreements, and Collaborations

4 MARKET SIZE SEGMENT BY TYPE

4.1 Global Data Center Cooling Optimization Software Consumption Value and Market Share by Type (2021-2026)
4.2 Global Data Center Cooling Optimization Software Market Forecast by Type (2027-2032)

5 MARKET SIZE SEGMENT BY APPLICATION

5.1 Global Data Center Cooling Optimization Software Consumption Value Market Share by Application (2021-2026)
5.2 Global Data Center Cooling Optimization Software Market Forecast by Application (2027-2032)

6 NORTH AMERICA

6.1 North America Data Center Cooling Optimization Software Consumption Value by Type (2021-2032)
6.2 North America Data Center Cooling Optimization Software Market Size by Application (2021-2032)
6.3 North America Data Center Cooling Optimization Software Market Size by Country
6.3.1 North America Data Center Cooling Optimization Software Consumption Value by Country (2021-2032)
6.3.2 United States Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
6.3.3 Canada Data Center Cooling Optimization Software Market Size and Forecast

+357 96 030922
info@marketpublishers.com

(2021-2032)
6.3.4 Mexico Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)

7 EUROPE

7.1 Europe Data Center Cooling Optimization Software Consumption Value by Type (2021-2032)
7.2 Europe Data Center Cooling Optimization Software Consumption Value by Application (2021-2032)
7.3 Europe Data Center Cooling Optimization Software Market Size by Country
7.3.1 Europe Data Center Cooling Optimization Software Consumption Value by Country (2021-2032)
7.3.2 Germany Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
7.3.3 France Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
7.3.4 United Kingdom Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
7.3.5 Russia Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
7.3.6 Italy Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)

8 ASIA-PACIFIC

8.1 Asia-Pacific Data Center Cooling Optimization Software Consumption Value by Type (2021-2032)
8.2 Asia-Pacific Data Center Cooling Optimization Software Consumption Value by Application (2021-2032)
8.3 Asia-Pacific Data Center Cooling Optimization Software Market Size by Region
8.3.1 Asia-Pacific Data Center Cooling Optimization Software Consumption Value by Region (2021-2032)
8.3.2 China Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
8.3.3 Japan Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
8.3.4 South Korea Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)

+357 96 030922
info@marketpublishers.com

8.3.5 India Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
8.3.6 Southeast Asia Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
8.3.7 Australia Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)

9 SOUTH AMERICA

9.1 South America Data Center Cooling Optimization Software Consumption Value by Type (2021-2032)
9.2 South America Data Center Cooling Optimization Software Consumption Value by Application (2021-2032)
9.3 South America Data Center Cooling Optimization Software Market Size by Country
9.3.1 South America Data Center Cooling Optimization Software Consumption Value by Country (2021-2032)
9.3.2 Brazil Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
9.3.3 Argentina Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)

10 MIDDLE EAST & AFRICA

10.1 Middle East & Africa Data Center Cooling Optimization Software Consumption Value by Type (2021-2032)
10.2 Middle East & Africa Data Center Cooling Optimization Software Consumption Value by Application (2021-2032)
10.3 Middle East & Africa Data Center Cooling Optimization Software Market Size by Country
10.3.1 Middle East & Africa Data Center Cooling Optimization Software Consumption Value by Country (2021-2032)
10.3.2 Turkey Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
10.3.3 Saudi Arabia Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)
10.3.4 UAE Data Center Cooling Optimization Software Market Size and Forecast (2021-2032)

11 MARKET DYNAMICS

+357 96 030922
info@marketpublishers.com

11.1 Data Center Cooling Optimization Software Market Drivers
11.2 Data Center Cooling Optimization Software Market Restraints
11.3 Data Center Cooling Optimization Software Trends Analysis
11.4 Porters Five Forces Analysis
11.4.1 Threat of New Entrants
11.4.2 Bargaining Power of Suppliers
11.4.3 Bargaining Power of Buyers
11.4.4 Threat of Substitutes
11.4.5 Competitive Rivalry

12 INDUSTRY CHAIN ANALYSIS

12.1 Data Center Cooling Optimization Software Industry Chain
12.2 Data Center Cooling Optimization Software Upstream Analysis
12.3 Data Center Cooling Optimization Software Midstream Analysis
12.4 Data Center Cooling Optimization Software Downstream Analysis

13 RESEARCH FINDINGS AND CONCLUSION

14 APPENDIX

14.1 Methodology
14.2 Research Process and Data Source
14.3 Disclaimer

I would like to order

Product name: Global Data Center Cooling Optimization Software Market 2026 by Company, Regions, Type and Application, Forecast to 2032

Product link: https://marketpublishers.com/r/GD72EA9F58D0EN.html

Price: US$ 3,480.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:
info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page https://marketpublishers.com/r/GD72EA9F58D0EN.html
