Data Center Due Diligence Service is an independent, systematic, and in-depth evaluation process designed to provide crucial information for business decisions such as investment and M&A, asset transactions, or major leases. This service involves a professional third-party team conducting a comprehensive review of the target data center's physical infrastructure, design standards, operational reliability, energy efficiency, and compliance. Its core focus is on revealing potential risks (such as insufficient power redundancy and cooling capacity deficiencies) and value enhancement opportunities through on-site inspections, technical document review, performance testing, and financial analysis. The resulting professional report helps clients verify asset conditions, accurately value assets, optimize transaction structures, and avoid significant investment mistakes caused by information asymmetry.

Data Center Due Diligence Services are rapidly evolving alongside the surge in global data center investment transactions. As data centers are positioned as critical digital infrastructure, institutional investors and enterprise users are increasingly relying on this service before making merger, acquisition, financing, and leasing decisions. The industry is exhibiting a high degree of specialization and segmentation, with service scope expanding from traditional financial, legal, and auditing to in-depth technical areas such as power redundancy, cooling efficiency, compliance and carbon reduction, and geological hazard assessment. Simultaneously, clients are placing higher demands

on the timeliness of due diligence, global execution capabilities, and quantitative risk analysis, driving service providers to build expert networks and data models to provide accurate insights into asset valuation and operational risks.
