According to our (Global Info Research) latest study, the global Data Center Humidification System market size was valued at US\$ 12880 million in 2024 and is forecast to a readjusted size of USD 19460 million by 2031 with a CAGR of 6.1% during review period.

The data center humidification system is a humidity control device designed specifically for the computer room environment. Through ultrasonic, high-pressure micro-mist or electrode humidification technology, it accurately maintains the relative humidity of the computer room in the appropriate range of 40%~60%, preventing static electricity accumulation from causing equipment damage, and avoiding the risk of condensation caused by excessive humidity. The system integrates intelligent temperature and humidity sensors and automatic control modules, and real-time linkage with air conditioning and fresh air systems to ensure efficient and energy-saving operation. It also has water filtration, anti-corrosion and low-maintenance design to ensure the stability of data center equipment and data security.
