According to our (Global Info Research) latest study, the global Data Center Immersion Cooling Coolant market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Data Center Immersion Cooling Coolant is an important component of data center cooling technology. Its performance and characteristics have a direct impact on the cooling effect and system stability. In the data center immersion cooling system, the coolant directly removes the heat generated by the equipment through circulation or boiling phase change.

Latest Development:

The latest document issued by China requires that by 2025, the PUE value of large and ultra-large data centers will be reduced to below 1.3, and liquid cooling can reduce the PUE value to around 1.1, meeting policy requirements.

In December 2022, 3M announced that it would withdraw from all perfluorinated and polyfluoroalkyl substances (PFAS) production by the end of 2025. 3M will stop producing all fluoropolymers, fluorinated fluids and PFAS-based additive products.
