Abstracts

According to our (Global Info Research) latest study, the global Data Center Infrastructure Management Software market size was valued at US\$ 1980 million in 2025 and is forecast to a readjusted size of US\$ 3616 million by 2032 with a CAGR of 9.0% during review period.

Data Center Infrastructure Management (DCIM) software is a platform designed to monitor, analyze, and manage the physical resources of a data center. It integrates data from servers, racks, power distribution systems, cooling units, environmental sensors, and network connections to enable asset management, capacity planning, energy consumption analysis, alarm handling, collaborative operations and maintenance (O&M), and infrastructure visualization.

Upstream components primarily include servers, network equipment, UPS units, power distribution systems, cooling equipment, smart racks, sensors, databases, and cloud computing platforms. Downstream markets mainly comprise cloud service providers, telecommunications operators, financial institutions, internet companies, government agencies, and third-party data center operators.

The future of global DCIM software lies in cloud-based deployment, AI-driven analytics, digital twins, and automated O&M. The rapid construction of AI computing centers, high-density racks, and edge data centers will drive demand for real-time capacity management, liquid cooling monitoring, thermal environment analysis, and energy optimization. Software solutions will increasingly integrate with building management systems, IT service management (ITSM) tools, configuration management databases (CMDB), energy management platforms, and hybrid cloud tools, thereby mitigating

failure risks through predictive maintenance and intelligent scheduling. Additionally, features such as carbon emission accounting, renewable energy management, and PUE optimization will become essential, while multi-site centralized management, mobile O&M capabilities, and subscription-based service models will see widespread adoption.
