## Abstracts

The global Data Center Inspection Robot market size is expected to reach \$ 1025 million by 2032, rising at a market growth of 12.5% CAGR during the forecast period (2026-2032).

A Data Center Inspection Robot is an autonomous or semi-autonomous mobile robot designed to perform routine inspection, monitoring, and diagnostic tasks inside data centers. It is typically equipped with sensors such as infrared cameras, LiDAR, temperature and humidity sensors, gas detectors, and visual cameras to detect equipment status, identify anomalies (e.g., overheating, smoke, cable faults), and ensure stable operation of IT infrastructure such as servers, power distribution units, and cooling systems. In 2025, global Data Center Inspection Robot production reached approximately 6,700 units, with an average global market price of around US\$ 65,000 per unit. Annual production capacity is 7,400 Units. Gross Profit Margin: 45%. Data center inspection robots sit at the intersection of industrial robotics, smart sensing, and data center infrastructure. The upstream chain mainly includes core hardware components such as LiDAR, infrared thermal cameras, IMUs, edge AI chips, batteries, and precision actuators. Midstream manufacturers integrate these components into autonomous mobile robots or quadruped platforms, combining navigation software (SLAM), AI anomaly detection, and DCIM connectivity. Downstream demand comes from hyperscale cloud providers, colocation operators, and large enterprise data centers that need continuous monitoring of temperature, power systems, and equipment status. Data center inspection robots are still an early-stage but high-value niche driven by automation demand in critical infrastructure. Their value is not in replacing human operators entirely, but in reducing risk, enabling 24/7 monitoring, and improving predictive maintenance capabilities. As AI-driven data centers continue to scale, especially with GPU-heavy workloads, demand for autonomous inspection systems is

expected to grow steadily, although adoption speed will depend on cost reduction and reliability improvements.

This report studies the global Data Center Inspection Robot production, demand, key manufacturers, and key regions.
