Abstracts

The global Data Center Lighting market size is expected to reach $ 621.8 million by 2030, rising at a market growth of 5.3% CAGR during the forecast period (2024-2030).

The main function of a data center is to provide an operating environment for IT equipment, but the comfort of workers cannot be ignored. Data center lighting will pay more attention to humanization and comfort, and provide staff with a comfortable and healthy working environment through reasonable lighting design and control strategies.

Data center lighting refers to the system that provides adequate lighting for the facilities inside the data center. Since data centers often have a large number of servers, storage devices and other IT equipment, which usually need to operate 24 hours a day, data center lighting needs to ensure sufficient lighting intensity while taking into account energy saving and equipment maintenance needs.

This report studies the global Data Center Lighting production, demand, key manufacturers, and key regions.
