Abstracts

According to our (Global Info Research) latest study, the global Data Center Operation and Maintenance Robots market size was valued at US$ 1646 million in 2025 and is forecast to a readjusted size of US$ 3176 million by 2032 with a CAGR of 9.8% during review period.

Data Center Operation and Maintenance Robots are intelligent, automated robotic systems deployed within data center facilities to assist or replace human labor in executing complex hardware maintenance, asset management, and operational support tasks. Unlike basic inspection robots, these systems integrate advanced technologies such as artificial intelligence, the Internet of Things (IoT), and big data analytics to achieve multi-dimensional data collection and intelligent decision-making. They possess capabilities including 3D environmental perception, autonomous navigation, dynamic obstacle avoidance, and precise mechanical manipulation (such as server plugging/unplugging and hard drive replacement). By seamlessly connecting with data center infrastructure (e.g., access control, elevators, and asset management systems), these robots enable 24/7 continuous operations, significantly enhancing maintenance efficiency, reducing human error, and ensuring the high availability of critical digital infrastructure.

In 2025, global Data Center Operation and Maintenance Robots production reached approximately 20000 units, and average price was 80,000USD/unit, with gross margin 35%.
