## Abstracts

The global Data Center Pre-terminated Copper Trunk Cables market size is expected to reach \$ 570 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Data center pre-terminated copper trunk cables refer to high-density copper cable assemblies in which the connectors (such as RJ45 modules or patch plugs) at both ends of the twisted-pair cables have been fully manufactured and tested at the factory. Designed specifically for efficient deployment in data centers, these assemblies enable rapid, 'plug-and-play' installation immediately upon delivery to the equipment room, thereby eliminating the time-consuming and labor-intensive on-site tasks of cable stripping and termination.

The upstream segment primarily involves high-purity copper conductors, insulation and sheathing materials, aluminum foil shielding layers, RJ45 plugs, information modules, and patch panels. The core focus of the midstream segment lies in the consistency of transmission performance, termination reliability, cabling density, delivery lead times, and on-site installation efficiency. The downstream market primarily targets cloud computing data centers, IDC facilities, and carrier-grade data centers, where these cables are utilized to facilitate high-density, rapid interconnections between switches, servers, patch panels, cabinet distribution units, and zone distribution areas.

In 2025, the sales volume of data center pre-terminated copper trunk cables is projected to reach approximately 2.6 million units; the global average price is expected to range between \$120 and \$170 per unit, with mainstream gross margins hovering between 30% and 45%.
