Abstracts

According to our (Global Info Research) latest study, the global Data Center Switches market size was valued at USD 15250 million in 2023 and is forecast to a readjusted size of USD 19880 million by 2030 with a CAGR of 3.9% during review period.

The task of managing connectivity between different networks and between end points is maintained by Data Center Switches. Data Center Switches are used to forward frames out of the ports to the end locations located in the network. Data Center Switches use standards-based protocols to segment traffic using the concept of virtual local area networks. Data Center Switches also prevent network loops using spanning tree protocol.

The complexity of networks has been on rise with the increasing dependency of organizations on cloud storage. The number of end nodes connected to a network has also increased steadily. This has resulted in complex networks which can be managed only by using network switches. This will help the market in growing and will also be a major driver for the market for network switches.

The Global Info Research report includes an overview of the development of the Data Center Switches industry chain, the market status of BFSI (Core Switch, Distribution Switches), Government & Defense (Core Switch, Distribution Switches), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Data Center Switches.

Regionally, the report analyzes the Data Center Switches markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives
