Abstracts

The global Data Communication Solutions market size is expected to reach \$ 372880 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Data Communication Solutions refer to a complete set of hardware, software, and technical services used to enable data access, exchange, routing, transmission, management, and security control between computers, servers, terminals, data centers, and different geographical locations. Its main components include Ethernet switches, routers, wireless LAN devices, network gateways, optical transmission equipment, network interfaces and interconnection products, as well as SDN, SD-WAN, network automation, visual monitoring, and security management software.

Driven by exponential AI training data traffic, hyperscale data center expansion, full-scale 5G/5G-A rollout, massive IoT terminal proliferation, enterprise multi-cloud migration and industrial digital transformation, Data Communication Solutions have shifted from isolated wired switching hardware to integrated end-to-end connectivity platforms integrating high-speed optical interconnection, autonomous network orchestration, edge computing gateway, zero-trust security, deterministic low-latency transmission and cloud-native network management software.

400G/800G/1.6T optical modules and Co-packaged Optics (CPO) become mainstream infrastructure for AI clusters, drastically cutting transmission latency and power consumption compared with traditional electrical interconnection. Autonomous Driving Network (ADN) empowered by telecom large models and digital twin realizes L4/L5 self-operation, featuring self-configuration, congestion self-optimization and fault self-repair, slashing manual O&M workload by over 60%. Wired fiber Ethernet retains dominant

market share (61.3% in 2025), while wireless communication solutions (5G-A, Wi-Fi 7, industrial Bluetooth, LPWAN) deliver the highest segment CAGR above 14%.
