According to our (Global Info Research) latest study, the global Data Logging Equipment market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Data Logging Equipments are devices that store various types of data measured and collected by sensors. They record at a rate of 10 to 1,000 times per second (10 to 1,000 Hz) at the fastest, and are intended for use in devices that observe signals at a slightly slower rate. The advantage is that it can operate and record independently of a computer.

They range from single-channel loggers to loggers capable of handling hundreds of inputs, depending on the application. There are two types of data loggers: those that record on paper and those that store digitally or analogously in memory.
