Abstracts

According to our (Global Info Research) latest study, the global Data Resource Management Platform market size was valued at US\$ 1204 million in 2025 and is forecast to a readjusted size of US\$ 2276 million by 2032 with a CAGR of 9.5% during review period.

The data resource management platform is a centralized system designed to effectively manage and optimize an organization's data resources. It includes data collection, storage, processing, integration, and analysis functions to improve data availability, quality, and security. Key functions include data integration, quality control, data governance, data sharing, and analysis support. The platform helps organizations enhance the value of data, support decision-making, and ensure data compliance and security.

The global data resource management platform market is undergoing a profound strategic transformation, driven by enterprises' urgent need for unified governance, AI readiness, and interoperability. With the exponential growth of data volume and increasingly stringent regulatory scrutiny, the market focus has shifted from single data storage to comprehensive platforms capable of breaking down data silos, ensuring compliance, and accelerating AI-driven decision-making. Cloud-native architectures are becoming mainstream, supporting elastic scaling and multi-cloud/on-premises hybrid deployments to meet enterprises' complex requirements for performance, cost control, and data residency. Simultaneously, platforms are deeply integrating AI capabilities, not only improving efficiency through automated governance (such as intelligent data quality inspection and automatic standardization) but also ensuring the credibility and explainability of AI applications through reproducible feature storage and model

governance. Furthermore, facing supply chain fluctuations and tariff pressures, enterprises are placing greater emphasis on platform resilience, prioritizing software-defined solutions that decouple from hardware dependencies and support cross-environment portability.
