According to our (Global Info Research) latest study, the global Data Visualization Libraries Software market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Data visualization libraries, also known as data visualization components, aid developers in the creation of a variety of data visuals for web and mobile projects. These visualizations, typically in the form of charts and graphs, help illustrate large amounts of data. This helps creators communicate the complexities of data and analytics in an easily digestible, understandable way.

While traditional data visualization software can help technical and non-technical users with their visualization needs, data visualization components are specifically designed for developers. Data visualization components are often built with certain web frameworks in mind, such as React, Angular, and Vue.
