Data desensitization refers to the deformation of certain sensitive information through desensitization rules to achieve reliable protection of sensitive private data. This allows for safe use of desensitized real data sets in development, testing and other non-production and outsourced environments.

In the case of customer security data or some commercially sensitive data, it is necessary to transform the real data and provide it for testing without violating the system rules, such as ID number, mobile phone number, card number, customer number and other personal information. Perform data desensitization. It is one of the database security technologies.
