According to our (Global Info Research) latest study, the global Daughter Station Compressor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Daughter Station Compressor is mainly used to pressurize the low-pressure natural gas carried in trailers or transport vehicles to high pressure so that it can be stored efficiently and safely in the gas storage facilities of the Daughter Station (such as gas storage wells, gas storage cylinders, etc.). Subsequently, these high-pressure natural gas are provided to CNG vehicles for refueling through gas vending machines.

As one of the core equipment of the CNG refueling Daughter Station system, the stability and reliability of the performance of the Daughter Station Compressor are directly related to the safe operation and gas supply capacity of the entire gas station. Therefore, when designing and selecting, it is necessary to fully consider factors such as its compression efficiency, energy consumption, noise, maintenance cost, and compatibility with the entire system.
