According to our (Global Info Research) latest study, the global Daylight Fluorescent Pigments market size was valued at USD 324.1 million in 2023 and is forecast to a readjusted size of USD 527.5 million by 2030 with a CAGR of 7.2% during review period.

Daylight fluorescent pigments are luminescent materials that require no artificially generated energy to reflect colored light and to give off fluorescent light. Fluorescent pigments are composed of dyed organic polymers that are formulated to be solvents for the fluorescence dyestuff. In contrast to ordinary colors, light emitted from a fluorescent color adds to the light returned by simple reflection to give the glow characteristic of daylight-fluorescent materials.
