According to our (Global Info Research) latest study, the global DC-Link Film Capacitors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

DC-Link film capacitors are capacitors used in DC circuits to connect DC circuits between power sources and loads. It usually uses a metal film as an electrode, and the surface is coated with an insulating material to achieve excellent electrical properties such as high capacitance and low leakage current. DC-Link film capacitors are commonly used in power electronics applications such as inverters, frequency converters, etc. They provide stable capacitance values and low energy loss to support high efficiency and high power density circuit designs. In addition, DC-Link film capacitors also have a long service life and reliability, and can work normally under harsh environmental conditions such as high temperature and high humidity.
