The global DC-Link Film Capacitors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

DC-Link film capacitors are capacitors used in DC circuits to connect DC circuits between power sources and loads. It usually uses a metal film as an electrode, and the surface is coated with an insulating material to achieve excellent electrical properties such as high capacitance and low leakage current. DC-Link film capacitors are commonly used in power electronics applications such as inverters, frequency converters, etc. They provide stable capacitance values and low energy loss to support high efficiency and high power density circuit designs. In addition, DC-Link film capacitors also have a long service life and reliability, and can work normally under harsh environmental conditions such as high temperature and high humidity.
