According to our (Global Info Research) latest study, the global DC Magnetron Sputtering Coater market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

DC magnetron sputtering coater is a type of thin film deposition equipment that uses a high-voltage, direct current (DC) power source and a magnetron target to create plasma in a vacuum chamber. The target material, usually a metal, is bombarded by plasma ions and the resulting atoms or molecules are deposited onto a substrate to form a thin film. The advantage of using DC magnetron sputtering over other methods is that it can achieve a high degree of control over the deposited film's quality, thickness, and uniformity, and can also be used with a wide range of target materials and substrates.
