Abstracts

The global DC Reduction Gearbox market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

DC geared motor, that is, geared DC geared motor, DC geared motor is based on ordinary DC geared motor, plus a matching gear reducer. The function of the gear reducer of the DC geared motor is that the DC geared motor provides a lower speed and the DC geared motor has a larger torque. At the same time, different reduction ratios of DC geared motor gearboxes can provide different speeds and torques. The reduction ratio of the DC geared motor is the ratio of the input speed of the gearbox (the direct speed of the DC geared motor) to the output speed of the gearbox. The DC geared motor is based on the ordinary DC geared motor, and the DC geared motor is added with a matching gear reducer. The function of the gear reducer of the DC geared motor is that the DC geared motor provides a lower speed and the DC geared motor has a larger torque. At the same time, different reduction ratios of DC geared motor gearboxes can provide different speeds and torques. This greatly improves the utilization rate of DC geared motors and DC geared motors in the automation industry. The DC geared motor refers to the integration of the reducer and the motor (motor). This integrated body is also commonly referred to as a gear motor or geared motor. DC geared motors are usually integrated and assembled by professional reducer manufacturers and supplied as a complete set. DC geared motors are widely used in steel industry, machinery industry, etc.
