Abstracts

According to our (Global Info Research) latest study, the global DC Slotless Motor market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The DC slotless motor is a specially designed brushless DC motor, which is different from the traditional slotted motor. It eliminates the slot structure on the stator and adopts a smooth stator with the windings directly wound on the outside of the stator. This design reduces the hysteresis between the rotor and the stator, reduces the torque fluctuation (i.e. the cogging effect), making the motor run more smoothly and more efficiently, and the performance is particularly superior at low speeds.
