A DC watermaker is an appliance used for converting seawater into freshwater by removing salts and impurities, utilizing direct current (DC) electricity to power the reverse osmosis process. This system consists of a DC motor that drives a pump and a reverse osmosis membrane, which forces water through the membrane to remove salts and contaminants, resulting in freshwater production. DC watermakers are commonly used in smaller boats, sailboats, and other marine vessels, as well as in remote off-grid locations, where AC power may not be available.
