Abstracts

According to our (Global Info Research) latest study, the global DDoS Protection and Mitigation market size was valued at USD 2269.1 million in 2023 and is forecast to a readjusted size of USD 5218 million by 2030 with a CAGR of 12.6% during review period.

This report studies the DDoS Protection and Mitigation market. A distributed denial-of-service (DDoS) attack is an attack in which multiple compromised computer systems attack a target, such as a server, website or other network resource, and cause a denial of service for users of the targeted resource. The flood of incoming messages, connection requests or malformed packets to the target system forces it to slow down or even crash and shut down, thereby denying service to legitimate users or systems.

DDoS attacks have been carried out by diverse threat actors, ranging from individual criminal hackers to organized crime rings and government agencies. In certain situations, often ones related to poor coding, missing patches or generally unstable systems, even legitimate requests to target systems can result in DDoS-like results.

There are three types of DDoS attacks. Network-centric or volumetric attacks overload a targeted resource by consuming available bandwidth with packet floods. Protocol attacks target network layer or transport layer protocols using flaws in the protocols to overwhelm targeted resources. And application layer attacks overload application services or databases with a high volume of application calls. The inundation of packets at the target causes a denial of service

DDoS protection and .Mitigation are solution for DDoS attack.

In the industry, F5 Networks profits most, while Arbor Network and Radware ranked 2 and 3. The market share of them is 17%, 11% and 6%.
