Abstracts

The global De-energized Tap-Changers(DETCs) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

De-energized Tap-Changers (DETCs), also known as Off-Circuit Tap-Changers (OCTCs) or Off-Load Tap-Changers (OLTCs), are electrical devices used in power transformers to adjust the turns ratio and regulate the output voltage of the transformer. Unlike On-Load Tap-Changers (OLTCs), which can change the turns ratio while the transformer is energized and under load, DETCs require the transformer to be de-energized (offline) during the tap-changing process.

This report studies the global De-energized Tap-Changers(DETCs) production, demand, key manufacturers, and key regions.
