Dead Shaft Pulley is a mechanical component used to transmit and support the operation of the conveyor belt. Its shaft is fixed on the frame and does not rotate, while the pulley body rotates around the fixed shaft through the bearing. Compared with Live Shaft Pulley, the design of Dead Shaft Pulley simplifies the dynamic characteristics of the shaft, reduces the rotating mass, and improves the stability of equipment operation and the convenience of maintenance. Widely used in industrial conveying systems, Dead Shaft Pulley has become an important part of efficient conveying solutions with its high load-bearing capacity and durability.
