## Abstracts

The global DEAE-Activated MagBeads market size is expected to reach \$ 322 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

DEAE-Activated MagBead is a kind of weak anion exchange magnetic bead, which is a weak anion exchange medium with good chemical and physical stability. It is a widely used functional biological magnetic bead, mainly used for protein nucleic acid, etc. Separation and purification can also be used for other weak anion exchange. Si-DEAE magnetic microspheres are monodisperse and non-agglomerated, regular spherical, with stable particle size, superparamagnetism, fast magnetic response, monodispersity and submicron particle size. In 2025, global DEAE-Activated MagBeads production reached approximately 7,546 K ML, with an average global market price of around US\$ 29 per ML.

DEAE-Activated MagBeads as ion exchange products in the magnetic bead subdivision field, have a relatively small market size compared to nucleic acid extraction magnetic beads but high technological added value. Currently, the global market is mainly dominated by high-end products from European and American companies, while Chinese manufacturers are rapidly rising in the mid to low end and OEM supply. The industry as a whole is showing a steady growth trend, with demand mainly coming from protein purification and molecular biology research. At the same time, with the development of the biopharmaceutical industry, antibody drug development, and automated high-throughput experimental platforms, the demand for DEAE magnetic beads with high binding capacity, high dispersibility, and batch stability continues to increase. In the future, products will develop towards high-performance functionalization, porous structure optimization, and customization. At the same time,

prices will show a certain downward trend driven by large-scale production, but high-end products still have strong premium ability.
