## **Abstracts**

According to our (Global Info Research) latest study, the global Debt Collection and Recovery Software market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Debt Collection and Recovery Software is used to automate the management and accounting process to go after overdue invoices on behalf of an organization or a specialized collection agency.

A debt collection is a type of financial account that's been sent to a third-party debt collector. Debt collectors are companies who collect unpaid debts for others. The original company with which you created the debt most likely assigned or sold the account to the collection agency after you missed several payments and it was unable to get you to pay. It's usually more cost-effective for companies to hire debt collectors than to continue to spend their own resources pursuing payment on delinquent accounts.
