## Abstracts

According to our (Global Info Research) latest study, the global Decarbonization-as-a-Service market size was valued at US\$ 656 million in 2025 and is forecast to a readjusted size of US\$ 67260 million by 2032 with a CAGR of 94.8% during review period.

Decarbonization-as-a-Service is a service that focuses on helping businesses to reduce greenhouse gas emissions (CO<sub>2</sub>e) from their suppliers. It combines technology, emissions, commercial and supply chain expertise to diagnose where the impact is, identify supplier solutions, and deliver the gains. For businesses, it's a kick start and acceleration of supply chain decarbonization.

With COP26 just around the corner, most expect to see a reinvigoration of commitments made in the Paris Agreement whereby world leaders signed up to limit global warming to 1.5°C or well below 2°C above pre-industrial levels by 2050. This means benchmarking global temperatures now (and eventually in 2050) against what they were in 1900 with the desired outcome being stability, within or below that 1.5-2°C range.

World leaders can and will set regulations in play, they can penalize and incentivize, but it is business that is directly or indirectly the source of the majority of emissions being produced today. Decarbonization-as-a-Service combining strategy, technology, and execution to help businesses tackle the emissions in the supply chain. The Decarbonization-as-a-Service (DaaS) market is emerging as a pivotal segment in the global effort to achieve carbon neutrality and reduce greenhouse gas emissions. DaaS encompasses a range of services and solutions offered to businesses and organizations to help them measure, manage, and mitigate their carbon footprint.

The Decarbonization-as-a-Service (DaaS) market in the USA is witnessing rapid growth, driven by increasing regulatory pressure, corporate sustainability goals, and financial incentives provided by federal and state governments. The market serves industries aiming to reduce their carbon footprint while balancing economic and operational efficiency. United States market for Decarbonization-as-a-Service is estimated to increase from US\$ 53.69 million in 2023 to US\$ 4,346.01 million by 2030, at a CAGR of 86.62% from 2024 through 2030.

The Decarbonization-as-a-Service (DaaS) market in China is expanding rapidly, driven by the country's dual carbon goals: achieving peak carbon emissions by 2030 and carbon neutrality by 2060. This growth is supported by strong governmental policies, technological advancements, and the pressing need for industries to transition to sustainable practices. China market for Decarbonization-as-a-Service is estimated to increase from US\$ 13.66 million in 2023 to US\$ 3,290.67 million by 2030, at a CAGR of 120.42% from 2024 through 2030.

The Decarbonization-as-a-Service (DaaS) market in Europe is a rapidly expanding sector, driven by stringent environmental regulations, ambitious climate goals, and increasing corporate commitments to sustainability. Europe's leadership in global decarbonization efforts positions it as a hub for innovation, policy development, and investment in green technologies and services. Europe market for Decarbonization-as-a-Service is estimated to increase from US\$ 64.83 million in 2023 to US\$ 6,832.51 million by 2030, at a CAGR of 92.84% from 2024 through 2030.

D-a-a-S is underpinned by cutting-edge partner technology that can ingest multiple data types to produce a consolidated Co2e picture. The tech can also continuously learn, improving accuracy over time and providing intelligent visibility of progress towards net-zero. The market for Decarbonization-as-a-Service is being driven by regulatory pressures, investor demand for ESG practices, rising energy costs, consumer preferences for sustainable products, and advancements in technology. DaaS is set to play a critical role in helping businesses across industries navigate the complexities of decarbonization and meet their sustainability goals while driving innovation and

operational efficiencies.
