## Abstracts

According to our (Global Info Research) latest study, the global Decarbonized Concrete market size was valued at US\$ 638 million in 2025 and is forecast to a readjusted size of US\$ 1525 million by 2032 with a CAGR of 13.2% during review period.

In 2024, global Decarbonized Concrete production reached approximately 2,646 k ton, with an average global market price of around US\$ 234.33 per ton.

Decarbonized concrete is an innovative construction material, developed to mitigate CO<sub>2</sub> emissions during the production of traditional concrete by incorporating low-carbon raw materials, optimizing manufacturing processes, and integrating carbon capture technologies. Its current technological strategies primarily involve CO<sub>2</sub> mineralization and solidification, the replacement of clinker materials, and the creation of cement-free geopolymers or biological approaches. This material not only reduces the environmental load and advances the principles of a circular economy but also substantially decreases the carbon footprint of buildings over their entire lifecycle, while maintaining structural integrity and durability. It provides substantial backing for the construction industry's progress towards sustainable development, promoting resource conservation and environmental protection. Through these technological innovations, decarbonized concrete helps maintain ecological balance and enhances the overall performance of buildings, including thermal efficiency and durability, offering users long-term economic benefits and a comfortable living experience.

In the future, the Decarbonized Concrete industry is expected to see a continuous growth in market demand, presenting a broad revenue prospect for enterprises. Technological innovation will drive improvements in product performance and cost

reduction, while government policy support and standardization and certification will contribute to the healthy development of the industry. Enterprises need to strengthen supply chain integration, enhance supply chain efficiency, and expand into international markets through cross-industry collaboration. At the same time, brand building and international market expansion will be key strategies for boosting corporate competitiveness. Faced with increasingly fierce market competition, enterprises must focus on technological innovation, strengthen cost control, and work together to promote the maturity and sustainable development of the decarbonized concrete industry, achieving dual growth in revenue and profit.
