Abstracts

The global Decenoic Acid market size is expected to reach \$ 421 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Decenoic Acid refers to a group of unsaturated monocarboxylic fatty acids containing ten carbon atoms and one carbon-carbon double bond (chemical formula: $C_{10}H_{18}O_2$), with several positional isomers such as 2-decenoic acid, 4-decenoic acid, and 10-undecenoic acid-related derivatives used in specialty applications. It is widely utilized as an intermediate in flavors and fragrances, pharmaceuticals, cosmetics, antimicrobial formulations, specialty chemicals, surfactants, lubricants, and polymer additives due to its reactive double bond and fatty acid functionality. The supply chain begins with upstream raw materials including natural oils and fats (such as castor oil, coconut oil, palm kernel oil, and other oleochemical feedstocks) or petrochemical-derived olefins and aldehydes. These materials undergo processes such as hydrolysis, oxidation, ozonolysis, fermentation, metathesis, or selective synthesis to produce decenoic acid isomers. Midstream manufacturers purify and formulate decenoic acid into industrial, food-grade, cosmetic-grade, or pharmaceutical-grade products. Downstream users include flavor and fragrance companies, personal care and cosmetic manufacturers, pharmaceutical producers, specialty chemical formulators, lubricant additive suppliers, and research institutions, with demand driven by the growing use of bio-based chemicals, functional ingredients, and specialty intermediates. In 2025, global Decenoic Acid output was about 130,000 tons with 160,000 tons of capacity, average prices of USD 2,000-5,000 per ton, and gross margins around 29%.
