According to our (Global Info Research) latest study, the global Deception Technology Tools & Solutions market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Deception technology aims to deceive attackers by distributing a collection of traps and decoys across a system's infrastructure to imitate genuine assets. If an intruder triggers a decoy, then the server will log and monitor the attack vectors utilized throughout the duration of the engagement.

Increasing network security threats: As network security threats become increasingly serious and attack methods continue to change, traditional security protection measures can no longer meet existing security needs. Therefore, more advanced and effective deception technology tools and solutions are needed to improve the efficiency and accuracy of security protection.

Promoted by technological innovation: With the rapid development of technologies such as artificial intelligence and virtualization, deception technology tools and solutions are also constantly innovating and upgrading. Through technological innovation, we can better simulate the real environment, improve the fidelity and effect of deception, and provide more effective support for security protection.
