According to our (Global Info Research) latest study, the global Decoking Control Valve market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A decoking control valve, also known as a coke drum unheading valve, is a specialized type of valve used in delayed coking units within the petroleum refining industry. It plays a critical role in the coke drum unheading process, which is a crucial step in removing coke deposits from the drum's internal surfaces.

The coke drum unheading process involves removing the top head or lid of the coke drum to access the accumulated coke deposits inside. This allows for the introduction of high-pressure water jets that break up the coke deposits, creating a slurry mixture that can be removed from the bottom of the drum. The decoking control valve helps facilitate this process by controlling the flow of material and ensuring the safe and efficient unheading of the coke drum.
