Abstracts

The global Decrystallized Anthracene Oil market size is expected to reach \$ 548 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

In 2025, the global sales volume of Decrystallized Anthracene Oil was approximately 550,000 tons, with an average global market price of about USD 680/ton. The gross margin of major producers in the industry was generally in the range of 10%-18%.

Decrystallized Anthracene Oil is an oil-phase mixture obtained after crude anthracene is separated from coal tar anthracene oil fractions through cooling crystallization, centrifugation or filtration. It is an industrial mixed aromatic oil product in the coal tar deep processing industry. The product mainly contains residual anthracene, phenanthrene, carbazole, fluorene, heavy aromatics and a small amount of nitrogen- and sulfur-containing heterocyclic compounds. It features high aromatic content, heavy fraction characteristics, relatively high viscosity and good blending adaptability.

The upstream of the Decrystallized Anthracene Oil industry chain mainly includes coal tar, first anthracene oil, high-anthracene oil and other anthracene oil fractions, as well as crystallization, centrifugation, filtration, storage and transportation equipment. The midstream consists of coal tar deep processing enterprises that produce crude anthracene and Decrystallized Anthracene Oil through anthracene oil fractionation, cooling crystallization and solid-liquid separation. The downstream applications mainly include carbon black manufacturing, refractory materials, wood preservation, coal tar deep processing and oil blending, and industrial fuels. The product value is mainly determined by residual anthracene content, distillation range, aromatic content, impurity control, stable supply capability and compatibility with downstream systems such as

carbon black oil and heavy aromatic oils.
