## Abstracts

The global Decylalcohol market size is expected to reach \$ 47.69 million by 2032, rising at a market growth of 2.1% CAGR during the forecast period (2026-2032).

Decylalcohol (CAS 112-30-1) also called 1-Decanol, 1-Decanol is a straight chain fatty alcohol with ten carbon atoms and the molecular formula  $C_{10}H_{21}OH$ . It is a colorless to light yellow viscous liquid that is insoluble in water and has an aromatic odor. The interfacial tension against water at 20 °C is 8.97 mN/m. In 2024, global Decylalcohol production reached approximately 14865 MT, with an average global market price of around US\$ 2643 per MT.

The decyl alcohol market sits within the wider fatty alcohols and surfactant-intermediates space, supplying a C10 primary alcohol used in surfactants, personal-care formulations, industrial cleaners, lubricants and plastic additives. Demand is strongest from home and personal care (shampoos, body washes, detergents), followed by industrial and institutional cleaning, lubricants and specialty chemical applications where controlled hydrophobicity and biodegradability are required. The industry chain runs from natural oils or petrochemical feedstocks, through oxo/alcohol production and purification, to formulators of surfactants, personal-care, cleaning and industrial products.

Key driving factors include rising global consumption of detergents and personal-care products in emerging markets, the premiumization of shampoos and body washes that use tailored surfactant systems, and regulatory/brand pressure for more biodegradable and often bio-based ingredients, which supports decyl alcohol derived from natural oils. Additional momentum comes from industrial cleaning, metalworking and plastic-additive uses that value its balance of performance and cost, as well as ongoing formulation

work to replace more controversial surfactant intermediates. Headwinds include volatility in feedstock prices (petrochemical or vegetable oils), competition from other chain-length fatty alcohols, and cost pressure from major FMCG brands that keep pricing in check. Overall, producers of decyl alcohol typically realize modest-to-moderate gross profit margins, most commonly in the range of about 15–28%, with higher margins for bio-based, high-purity or specialty grades and lower margins for bulk, commodity supply under long-term contracts.

This report studies the global Decylalcohol production, demand, key manufacturers, and key regions.
