The global Dedicated Cloud Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A dedicated cloud is a single-tenant cloud infrastructure, which essentially acts as an isolated, single-tenant public cloud. Dedicated clouds are set as an infrastructure as a service (IaaS) and are made to reduce an organizations downtime and cost while promoting flexibility and performance. Dedicated clouds work especially well for resource-intensive workloads.

Dedicated clouds may appeal to many regulated businesses because the servers each customer uses is isolated. With this isolation, users can have more control and customization options when it comes to features such as bandwidth and storage. Organizations can use a dedicated cloud for developing or extending on-premise applications in the cloud with included management tools, without needing to worry about the scalability of their infrastructure.
