Abstracts

The global Deep Brain Stimulation Devices market size is expected to reach \$ 2969 million by 2032, rising at a market growth of 10.3% CAGR during the forecast period (2026-2032).

Deep brain stimulation (DBS) is a neurosurgical procedure involving the implantation of a medical device called a neurostimulator (sometimes referred to as a 'brain pacemaker'), which sends electrical impulses, through implanted electrodes, to specific targets in the brain (brain nuclei) for the treatment of movement and neuropsychiatric disorders. DBS in select brain regions has provided therapeutic benefits for otherwise-treatment-resistant disorders such as Parkinson's disease, essential tremor, dystonia, chronic pain, major depression and obsessive-compulsive disorder (OCD). Despite the long history of DBS, its underlying principles and mechanisms are still not clear. DBS directly changes brain activity in a controlled manner, its effects are reversible (unlike those of lesioning techniques), and it is one of only a few neurosurgical methods that allow blinded studies.

Global Deep Brain Stimulation Devices key players include Medtronic, St Jude Medical, etc. Global top two manufacturers hold a share over 80%.

North America is the largest market, with a share over 50%, followed by China, and Europe, both have a share over 35 percent.

In terms of product, Single-channel DBS is the largest segment, with a share over 55%. And in terms of application, the largest application is Parkinson's Disease, followed by Essential Tremor, Dystonia, etc.
