## **Abstracts**

A deep-cycle battery is a lead-acid battery designed to be regularly deeply discharged using most of its capacity. In contrast, starter batteries are designed to deliver short, high-current bursts for cranking the engine, thus frequently discharging only a small part of their capacity. Scope of the Report:

This report focuses on the Deep Cycle Batteries in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The telecom industry is growing at a faster pace particularly in the developing nations. More telecom towers have been built in remote locations where the grid connectivity is bad. Hence, remote towers need efficient energy supply that can be provided by a combination of renewable energy sources and the diesel generators for backup. The focus is on hybrid power systems as they have less impact on the environment. This is because hybrid power systems produce less carbon emissions when compared with the legacy power systems that use a different combination of energy types.

Due to the presence of a large number of regional and international manufacturers across the globe, the deep cycle batteries market is highly competitive and diversified. Some of the major challenges faced by these manufacturers are intense competition, rapid advances in technology, frequent changes in government policies, and environmental regulations.

The worldwide market for Deep Cycle Batteries is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
