Abstracts

According to our (Global Info Research) latest study, the global Deep Drawing Machines market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Deep drawing is a sheet metal forming process in which a sheet metal blank is radially drawn into a forming die by the mechanical action of a punch. It is thus a shape transformation process with material retention. The flange region (sheet metal in the die shoulder area) experiences a radial drawing stress and a tangential compressive stress due to the material retention property. These compressive stresses (hoop stresses) result in flange wrinkles (wrinkles of the first order). Wrinkles can be prevented by using a blank holder, the function of which is to facilitate controlled material flow into the die radius.

In U.S., deep drawing machines key players include Waterbury Farrels, Schuler AG, Beckwood Press, AP&T, etc. Global top four manufacturers hold a share over 40%. In terms of product, 300-1000 Ton is the largest segment, with a share about 54%. And in terms of application, the largest application is industrial, with a share about 52%.
