Abstracts

The global Deep Drawing Machines market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In U.S., deep drawing machines key players include Waterbury Farrels, Schuler AG, Beckwood Press, AP&T, etc. Global top four manufacturers hold a share over 40%. In terms of product, 300-1000 Ton is the largest segment, with a share about 54%. And in terms of application, the largest application is industrial, with a share about 52%.

Deep drawing is a sheet metal forming process in which a sheet metal blank is radially drawn into a forming die by the mechanical action of a punch. It is thus a shape transformation process with material retention. The flange region (sheet metal in the die shoulder area) experiences a radial drawing stress and a tangential compressive stress due to the material retention property. These compressive stresses (hoop stresses) result in flange wrinkles (wrinkles of the first order). Wrinkles can be prevented by using a blank holder, the function of which is to facilitate controlled material flow into the die radius.
