## Abstracts

According to our (Global Info Research) latest study, the global Deep Pour Epoxy Resin market size was valued at US\$ 1686 million in 2025 and is forecast to a readjusted size of US\$ 2789 million by 2032 with a CAGR of 7.4% during review period.

Deep Pour Epoxy Resin is a specialized type of two-component epoxy system formulated for casting thick layers?typically ranging from 2 to 10 inches (5?25 cm) or more in a single pour?without excessive heat buildup, shrinkage, or cracking. Unlike standard epoxy coatings or laminating resins, deep pour epoxy is engineered with slower curing kinetics and controlled exothermic reactions, allowing large volumes to cure evenly while maintaining optical clarity and structural stability. It is commonly used for applications such as river tables, large resin castings, artistic sculptures, encapsulation of objects, decorative panels, and industrial mold casting. These resins typically consist of a low-viscosity epoxy base resin combined with a compatible hardener (curing agent), and may include additives to enhance UV resistance, bubble release, and transparency, making them suitable for both decorative and structural casting applications. In 2025, global Deep Pour Epoxy Resin output was about 290,000 tons with 400,000 tons of capacity, average prices of USD 4,800 ? 7,500 per ton, and gross margins around 28%.
