Abstracts

Deep water source cooling is a form of air cooling for process and comfort space cooling which uses a large body of naturally cold water as a heat sink. It uses water at 4 to 10 degrees Celsius drawn from deep areas within lakes, oceans, aquifers or rivers, which is pumped through the one side of a heat exchanger.

Scope of the Report:

This report focuses on the Deep Water Source Cooling Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The rising demand for reducing building energy consumption will be one of the major factors that will have a positive impact on the global deep water source cooling systems market during the forecast period. The fitment of higher efficiency cooling systems, such as deep water source cooling systems assist in lowering the overall energy use and operating cost for the building owner.

In terms of geographic regions, EMEA will be the major revenue contributor to the market throughout the forecast period. Factors such as the rising demand for deep water source cooling systems to lower the total building energy consumption rates in several countries will drive the market's growth prospects in this region during the next few years.

One challenge in the market is expensive and time-consuming construction and installation. The ongoing drive toward increasing energy efficiency, reducing energy costs, and lowering the emissions is expected to create a significant opportunity for the growth of deep water source cooling systems. However, the extremely high initial cost

of capital and installation is a major challenge that may impede the growth in the global market

The worldwide market for Deep Water Source Cooling Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
